11 A *2. Independent groups: test difference in means

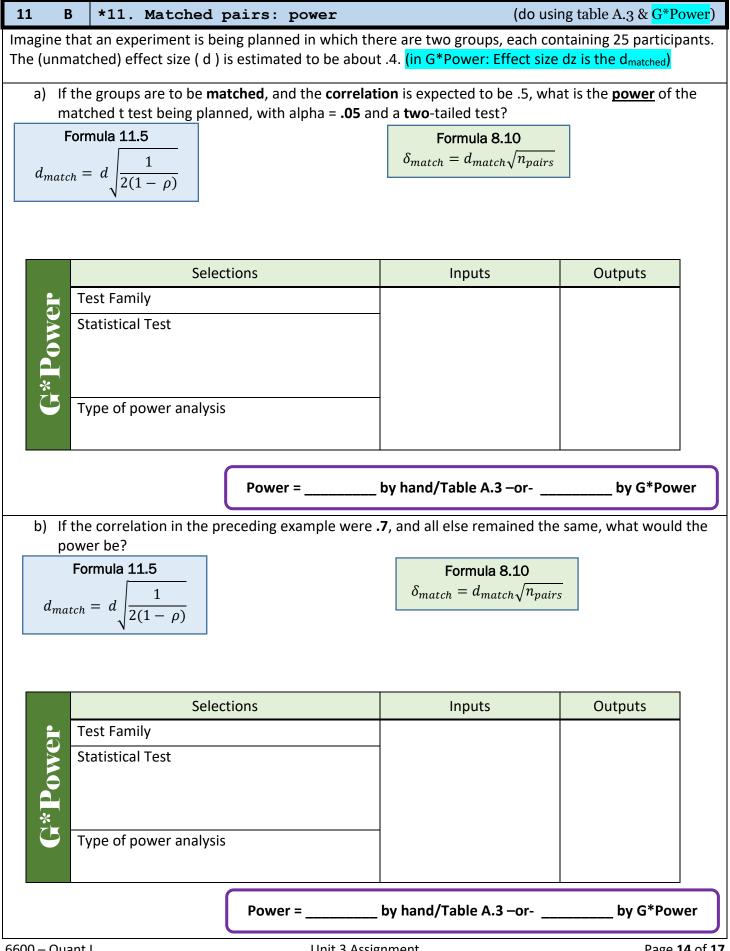

Can the depression of psychotherapy patients be reduced by treating them in a room painted in bright primary colors, as compared to a room with a more conservative look with wood paneling? **Ten** patients answered depression questionnaires after receiving therapy in a primary-colored room, and 10 patients answered the same questionnaire after receiving therapy in a traditional room. Mean depression was lower in the colored room ($\bar{X}_{color} = 35$) than the traditional room ($\bar{X}_{trad} = 39$); the standard deviations wers_{color} = 7 and s_{trad} = 5, respectively.

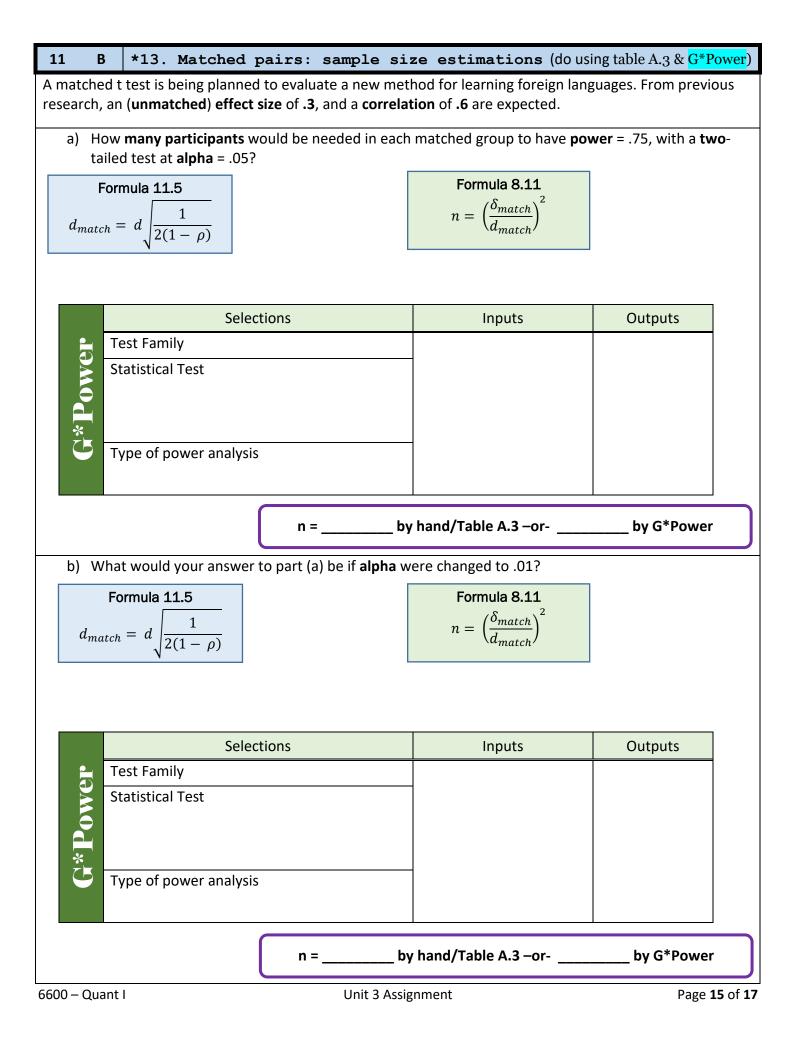

a) Calculate the t value for the test of two independent means

$$\begin{bmatrix} \mathbf{x}_{1} - \mathbf{X}_{2} \\ \frac{\mathbf{x}_{1}^{2} + \mathbf{x}_{2}^{2}}{\frac{\mathbf{x}_{1}^{2} + \mathbf{x}_{2}^{2}}{2}} \\ df = n_{1} + n_{2} - 2 \end{bmatrix} \\ \begin{bmatrix} \mathbf{t}_{1} \\ \mathbf{x}_{1} \\ \mathbf{x}_{2} \\ \mathbf{x}_{3} \\ \mathbf{x}_{4} \\ \mathbf{x}_{2} \\ \mathbf{x}_{1} \\ \mathbf{x}_{2} \\ \mathbf{x}_{2} \\ \mathbf{x}_{1} \\ \mathbf{x}_{2} \\ \mathbf{x}_{3} \\ \mathbf{x}_{4} \\ \mathbf{x}_{2} \\ \mathbf{x}_{1} \\ \mathbf{x}_{2} \\ \mathbf{x}_{2} \\ \mathbf{x}_{1} \\ \mathbf{x}_{2} \\ \mathbf{x}_{1} \\ \mathbf{x}_{2} \\ \mathbf{x}_{1} \\ \mathbf{x}_{2} \\ \mathbf{x}_{1} \\ \mathbf{x}_{2} \\$$

	Α	7. Matched p	airs exper	iments			
a)	a) Design an experiment for which it would be reasonable for the researcher to match the participants into pairs						
	into	Suns					
b)	Desi	an an experiment ir	n which it would	d be difficult to match	participants in	to pairs.	
,
